

ASN Sr. Sec School  
**CLEANLINESS PROJECT**  
**CLASS –XB**

Maintenance of cleanliness in a country depends on education level, socio-economic practices, technology, political will and above all people's participation.

As young and budding global citizen our children must learn about these factors not only to be merely aware about them but also imbibe the same cleanliness practices in their routine so as to make their surroundings and country worth living for generations to come.

In line with above philosophy prepare a model (working/non-working) covering any one or more aspects (Given below) pertaining to cleanliness practices across the world.

**Aspects:**

- Modern adaptation of traditional cleanliness practices.
- Practices engineered in contemporary world.
- Practices designed by particular communities.
- Modern vs traditional practices.

Model must be duly supported by illustrations in the form of scrolls/ fact file/ calendar/ or any other descriptive medium, covering its social/ historical/ religious/ engineering aspect.

**Supporting must correspond to model strictly.**

**Important-** A special supporting must be prepared analysing if a particular practice can be adopted in India. Where and how / Why not?

(In case the model depicts practices from outside India)

**Instructions:-**

- 1) Use eco-friendly material only.
- 2) Project to be done in groups. Each group should have 5 members.
- 3) 1 model to be made by each group and supportings to be made by each member individually.
- 4) **Complete project must be presented through Sway presentation also.**
